DISINFECTION
CABINET

SAFE AND SANITARY CASH HANDLING

Suitable for any business that handles cash, including banks and cash centres, as well as document-heavy companies. The Deposita Banknote Disinfection Cabinet provides 360° detoxification and thorough disinfection of notes and documents. Reduce the risk of infection for staff and customers from viruses and bacteria that survive on cash and documents.

The disinfection system uses an intense UV lamp and ozone to destroy viruses and bacteria's DNA structure within an hour. The disinfection is highly efficient, reducing bacteria and viruses on the surface of notes and documents by 99.99%.

PROTECT YOU, YOUR STAFF AND CUSTOMERS
FROM ONE OF THE LEAST CONSIDERED HAZARDS
OF HANDLING CASH OR PAPERWORK.

BANKNOTE DISINFECTION CABINET

- Destroys viruses and bacteria within an hour
- Reduces bacteria and viruses on the surface of notes and documents by 99.99%
- Destroys all common bacteria, viruses, moulds, cysts and parasites
- Leaves no residue or odour
- Easily and quickly ensures the safety of staff and customers
- Sturdy, secure construction

WE DEVELOP SUPERIOR, INNOVATIVE PRODUCTS
THAT OFFER MORE FUNCTIONALITY,
MORE EFFICIENCY AND MORE SAFETY.

A SCIENTIFICALLY TESTED METHOD OF DISINFECTING MONEY

Ozone (O₃) is created when you expose diatomic oxygen (O₂) to ultraviolet (UV) light. Ozone is a naturally powerful oxidising and disinfecting agent. Ozone breaks the chemical bonds of organic compounds. This process facilitates disinfection by disrupting and breaking down cell walls, exposing the cell's contents to further disinfecting.

STEP ONE:

Place the cash or documents to be sterilised in the sterilising layers.

STEP TWO:

Power on the cabinet.

STEP THREE:

Start the disinfection process.

STEP FOUR:

Wait for the cabinet to signal when the disinfection is complete.

STEP FIVE:

After 20 minutes, you can open and remove disinfected cash or documents from the cabinet.
